Education

G.B. Pant DSEU Campus-I, Delhi, India

Aug 2024 - Jun 2028

Bachelor of Technology in Computer Science and Engineering

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Dart

Frontend: Next.js, React, Tailwind CSS, Flutter

Backend: Node.js, Express.js, NestJS, FastAPI, tRPC, Celery

Databases & ORMs: PostgreSQL, Prisma, Drizzle ORM, Supabase, MongoDB

Auth & Security: JWT, Role-Based Access Control (RBAC), bcrypt

Tools: Git, Docker, Postman, Cypress, Swagger, LangGraph

Projects

Orbit - Task Management Application

GitHub

Next.js, tRPC, Drizzle ORM, PostgreSQL

- Built a PostgreSQL database schema to support role-based access control (RBAC) across multiple workspaces.
- Added a drag-and-drop Kanban board that uses fractional indexing to update task order efficiently.
- Used tRPC to connect the Next.js frontend to the backend API with end-to-end type safety.
- Designed the user interface using Tailwind CSS and shadcn/ui for a clean, responsive layout.
- Set up an invitation system where organization admins can generate invite links for new members to join securely.

Nexus CMS - AI Complaint Categorization

GitHub

FastAPI, Celery, LangGraph, PostgreSQL

- Set up a FastAPI backend with Celery and Redis to process incoming data asynchronously in the background.
- Used LangGraph to create a pipeline of AI prompts that automatically extract details and assess the risk of complaints.
- Stored complaints in PostgreSQL and integrated pgvector to help users find similar historical issues.
- Built a dashboard in React 19 to let users view categorized complaints, filter by risk level, and monitor processing status.
- Ensured the main web server remains responsive under load by offloading all heavy AI inference tasks to background workers.

GrowthTrack - Employee Tracking Dashboard

GitHub

Flutter, NestJS, Prisma, PostgreSQL

- Built a cross-platform frontend using Flutter that works consistently on both web and mobile devices.
- Created a REST API using NestJS, organizing the code into controllers and services.
- Designed a relational database schema using Prisma to link employees, managers, and goals.
- Implemented secure authentication using JWT and Argon2 password hashing.
- Created separate views for employees to track their progress and managers to review team performance and promotion readiness.
